

Borel, bounded functions

Eulerian sources

bad sources

§??  
Lagrangian  
sources  
associated  
to a  
given  $\chi$

A Venn diagram with three large overlapping ellipses. The left ellipse is light blue and labeled 'Eulerian sources' in blue text at the bottom left. The right ellipse is light orange and labeled 'bad sources' in orange text at the bottom right. The top ellipse is light brown and labeled 'Borel, bounded functions' in black text at the top. The intersection of the blue and orange ellipses is a purple ellipse. The intersection of the blue and brown ellipses is a pink ellipse. The intersection of the orange and brown ellipses is a light purple ellipse. The intersection of all three ellipses is a darker purple ellipse. Inside this central intersection, the text '§??' is at the top, followed by 'Lagrangian sources associated to a given  $\chi$ ' in pink text.
